

Crossing the next bridge

Stephen Hemminger
Netconf 2011

Current Bridge

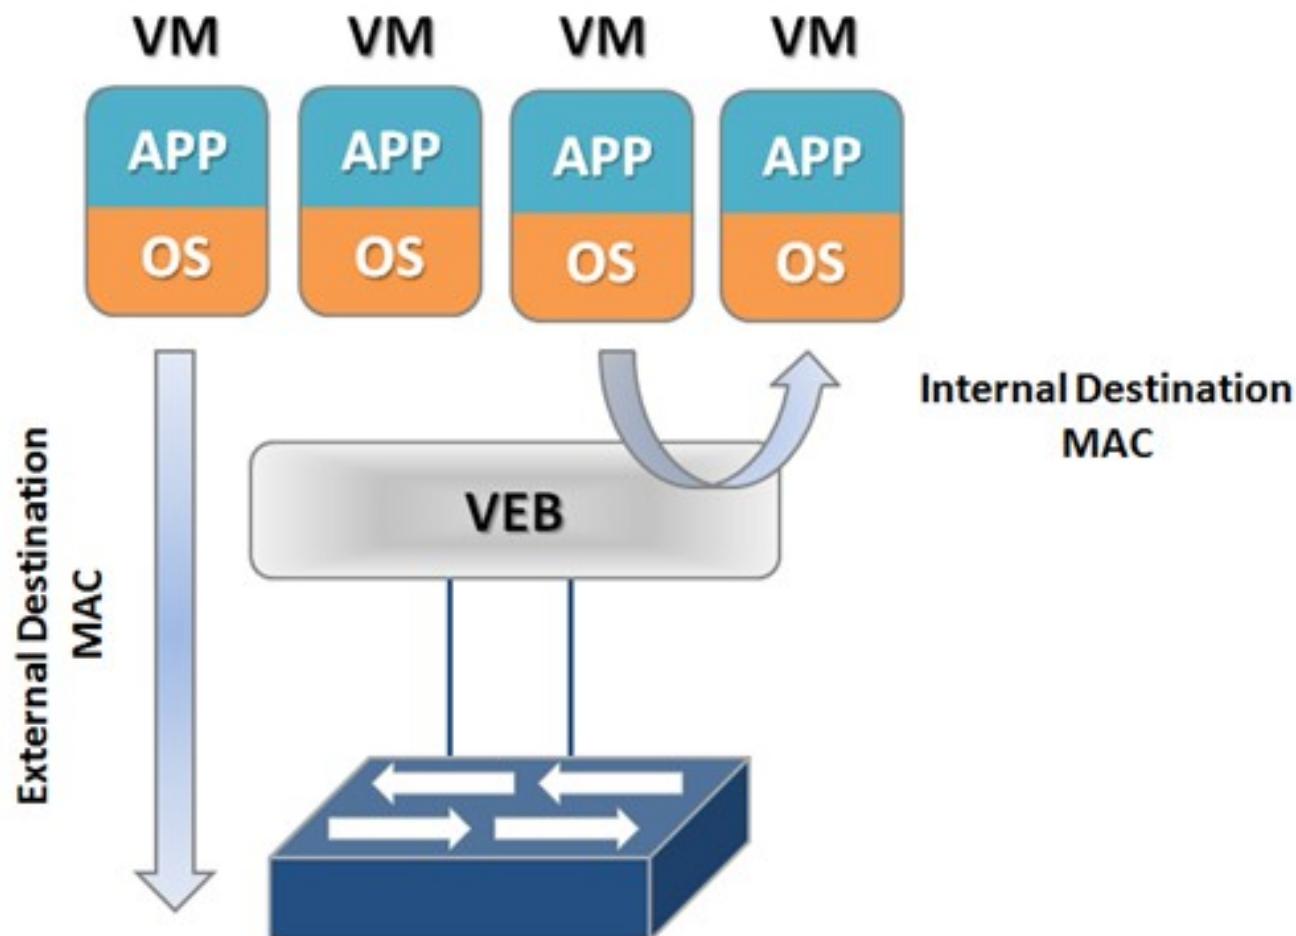

- loctl, sysfs, netlink
- RSTP userspace
- Iptables and ebtables
- Ethernet only

The competition

- Converged networking
 - Vmware Vswitch
 - Cisco Nexus

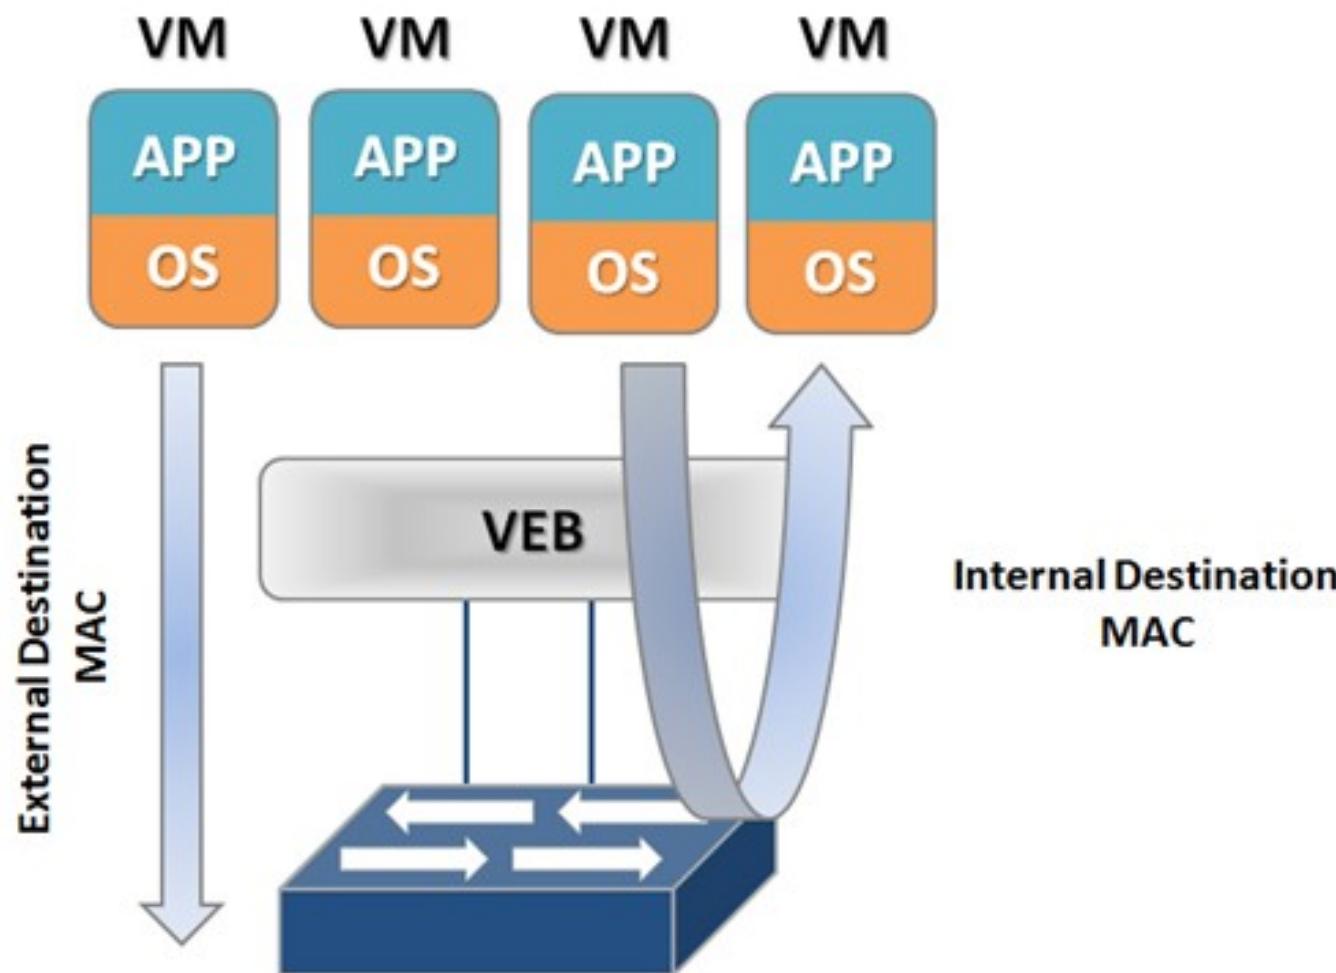

Virtual Edge Bridge

Normal VEB Operation

Virtual Ethernet Port Aggregator

VEPA VEB Operation

VN_Tag:

New architectures

- Userspace control plane— Openflow
- Hardware dataplane – Bridge offloading

Features

- API
 - RSTP in kernel
 - Per port control of STP – portfast, bpdufilter
 - Sysctl & netlink
- Security
 - Port mirroring
 - Transmit filtering
 - Keep iptables, ebttables for special case

Wishlist

- Netlink ↔ Openflow controller
- VNTag
- PVST
- TRILL
